## **DETAILED ACTION**

### ***Priority***

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d).

### ***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 11/09/200 being considered by the examiner.

### ***Claim Objections***

3. Claims 1, 4, 5, and 10 are objected to because of the following informalities: Claims 1, 5, and 10, the term "may" should be deleted; claim 4, delete "element" in line2. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an

international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-15 rejected under 35 U.S.C. 102(e) as being anticipated by Sezan et al. (US 6,236,395 B1).

Re claims 1, 5, and 10, Sezan discloses a data processor (fig. 2) for generating a feature data characteristic of the content of an input data (38 of fig. 2), comprising:

means (44 of fig. 2; and see also figure 13) for generating a feature data on the basis of a descriptor being a unit element defining a describing procedure and which is structured to have its attribute defined as lower-level element and may include other descriptor as attribute (see the description procedure as shown in cols. 14-26, and the details of the figure 13), and means for restoring a feature of the content of the input data by initializing the feature data generated on the basis of the descriptor (50 of fig. 2, e.g. the data storage unit is capably re-storing the generated description (DS of fig. 2)).

Re claims 2, 6, and 11, Sezan further discloses wherein the input data includes at least one of visual data and audio data included in a video data (38 of fig. 2).

Re claims 3, 7, 12, Sezan further discloses wherein the descriptor is generated to inherit functions from a higher-class descriptor including the capability of structuring (406 of fig. 13).

Re claims 4, 7, and 13, Sezan further discloses wherein the attribute as the lower-level element is structured by defining the attribute of the descriptor and/or a special attribute (426 of fig. 14, wherein the level determines the high or low level structure of key frame view description scheme).

Re claims 9, and 14-15, Sezan further discloses wherein the feature data is received along with the input data from an external apparatus (38 of fig. 2), and the restoring means restores the feature of the input data and generates a processed one of the input data (50 of fig. 2, see also col. 10).

6. Claims 1-15 rejected under 35 U.S.C. 102(e) as being anticipated by Filepp et al. (US 6,195,661 B1) as shown in figures 1, 2, 4a-4d, 5b, 8-10.

7. Claims 1-15 rejected under 35 U.S.C. 102(e) as being anticipated by Abecassis (US 6,038,267) as shown in figures 1-5.

8. Claims 1-15 rejected under 35 U.S.C. 102(e) as being anticipated by Kumar et al. (US 6,448,980 B1) as shown in figures 1-6A.

### ***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Smith et al. (US 6,223,183 B1) discloses a system and method for describing views in space, time, frequency, and resolution.
